EXPERIENCE

-
- Tata Consultancy Services** Chennai
 - Software Engineer* May 2022 - Present
 - Re-architected a legacy banking system into Spring Boot microservices, designing and unit testing 12 component-level REST endpoints to replace 40+ stored procedures, reducing production incident volume 30% through cleaner service boundaries and centralized error handling.
 - Achieved 99.9% message reliability across 4,500 transactions per hour by building a high-throughput along with Apigee, event-driven batch platform with Spring Boot, Spring JDBC and IBM MQ.
 - Contributed to automated CI/CD pipeline development using Tekton and Harness, moving code through build, test, and deployment stages on Kubernetes (Red Hat OpenShift) and cutting deployment time 70% (hours to minutes).
 - Eliminated unauthorized external vendor access by designing a JWT/OAuth 2.0 API gateway in Java 17, now the single-entry point for 100% of vendor traffic to internal banking services.
 - Debugged and resolved recurring production incidents by adding retry logic and automated alerting to Autosys batch workflows, providing ongoing production support and defect management for a Fortune 50 banking client.
 - Leveraged generative AI tools including GitHub Copilot (Claude, OpenAI Models, Gemini Pro) to enhance development efficiency across the software development lifecycle.
 - Delivered sprint commitments in an Agile environment, collaborating cross-functionally on requirement analysis, estimation, and code reviews to translate business needs into technical requirements.

SKILLS SUMMARY

-
- Languages:** Java, JavaScript, TypeScript, SQL, Bash
 - Frameworks:** Spring Boot, JUnit, Mockito, React, Angular, Spring Framework, NodeJS
 - Tools:** Kubernetes, Docker, GIT, DBeaver
 - Platforms:** Tekton, Harness, Ansible, Lightspeed, Linux, IBM Cloud
 - Messaging:** Apache Kafka, IBM MQ, JMS
 - Databases:** MS SQL Server, Oracle SQL, DB2, Redis

PROJECTS

-
- Legacy Frontend Modernization (Financial Data Platform)** Migrated a legacy Ant/Sencha-ExtJS frontend to React/Vite for a financial data platform, rebuilding UI behavior and layout in React/TypeScript while integrating with an Spring MVC backend. Resolved cross-cutting front-end integration issues including routing configuration, API client setup, and state/notification management to match legacy application behavior.
 - Balance Control Application** Delivered 24x7 uptime through traffic spikes by deploying a real-time transaction earmarking service on OpenShift with tuned pod autoscaling and processes 100% of requests with zero manual intervention via asynchronous JMS consumption.
 - Vendor API Gateway** Secured 100% of external vendor traffic by launching a gateway enforcing JWT bearer-token authentication; reduced data-layer boilerplate using Java 17 Records with JDBC.
 - Transaction Management Batch System** Designed a JDBC-backed batch system processing end-to-end banking transaction lifecycles with resolved undocumented XML edge cases from an upstream system with zero post-launch parsing defects.

CERTIFICATES

-
- Oracle Certified Associate Java SE 8 Programmer - 1Z0-808
 - Azure Integration and Security - AZ-101

EDUCATION

-
- Anna University** Chennai
 - Bachelor of Technology - Biotechnology*
